

SkillProof: Don't just claim what you built. **Prove it.**

A Gemini-powered platform that converts raw project evidence into verified technical profiles.

Resumes are full of claims, but **missing proof**

Recruiters struggle to distinguish between superficial certificates and genuine technical mastery.

01

The Evidence Gap

Students collect certificates and list buzzwords, but resumes rarely show what was personally built.

02

Verification Fatigue

Faculty and interviewers cannot easily verify if a student actually wrote the code or understands the architecture.

03

Undifferentiated Portfolios

Without evidence, a brilliant developer looks exactly like a student who followed a tutorial.

04

The Contributor Dilemma

It is nearly impossible to identify individual contributions in large team-based project repositories.

SkillProof converts evidence into **verified profiles**

Our one-sentence mission: Linking student claims to tangible work using high-reasoning AI.

Gemini API serves as the reasoning engine

We move beyond generic chatbots to perform deep structural analysis of technical evidence.

01

Evidence Understanding

Gemini analyzes code logic, UI screenshots, and demo videos to extract the project's "truth."

02

Technology Extraction

The AI identifies specific tech stacks (e.g., Java, MySQL, React) that are actually present in the evidence.

03

Claim-Evidence Matching

The core logic compares student assertions against detected implementation patterns.

04

Automated Storytelling

The system synthesizes raw technical data into a concise Problem-Solution-Implementation-Outcome narrative.

The Claim vs. Evidence differentiator

We categorize every skill claim into four distinct levels of evidence strength.

STRONG

Clear, direct evidence in the code or screenshots supports the student's claim.

MODERATE

Evidence exists but is incomplete or lacks specific detail in the current submission.

WEAK

Only tangential evidence is found; the claim is likely exaggerated or not well-documented.

UNSUPPORTED

No meaningful evidence exists in the submitted files to support the student's assertion.

Demo: Analyzing the "Aha!" Moment

Watch how SkillProof handles a student claiming a Machine Learning model without submitting the code.

Claim	Submitted Evidence	Support Level	Reason
Built Java Backend	Java source, REST controllers	STRONG	Evidence directly supports implementation.
Designed MySQL DB	SQL schema, table definitions	STRONG	Database structure is clearly defined.
Created ML Model	No model files or training data	UNSUPPORTED	No clear ML implementation found in submission.

Personalized Viva questions generated from work

Generic interview questions are replaced with deep-dives into the student's specific implementation.

Context-Aware

Your evidence shows a MySQL schema for attendance. How did you handle the many-to-many relationship between students and sessions?

Architecture Validation

You chose a REST-based architecture for this feature. Based on your code, what were the trade-offs you faced?

Anti-Plagiarism Hinting

By asking about specific lines of submitted code, we test if the student truly understands the implementation.

Preparation Tool

Students can use these AI-generated questions to prepare for real-world technical interviews.

The **Public Portfolio** with QR access

01 Unique Project ID

Every project is assigned a specific ID (e.g., SP-8F29A) for tracking and sharing.

02 Evidence Highlights

The profile showcases compelling pieces of evidence like code and UI shots.

03 QR Code Integration

Students place a SkillProof QR code on physical resumes or LinkedIn banners.

04 Recruiter Dashboard

Interface for hiring managers to see the Support Strength of every skill.

Turning project claims into evidence-backed proof

SkillProof bridges the gap between what students say and what they can actually demonstrate.

SkillProof represents the next evolution of the student portfolio. By leveraging the Gemini API, we move from a world of unverified "buzzword" resumes to a world of evidence-backed skill profiles. Our system ensures that every student who puts in the work has the proof to show for it, making the recruitment process more transparent, efficient, and fair for everyone involved.
